## 5.1 Project Planning - Agile Sprint Breakdown

### Agile Terminology (Project-Specific)

**Sprint:** A fixed 5-day period in which our team completes a set of ServiceNow tasks.

**Epic:** A major development phase, such as table creation or client script automation.

Story: A specific implementation task under each epic.

**Story Points:** Estimated effort using Fibonacci scale (1, 2, 3, 5, 8) — based on complexity.

## Sprint Plan

### Sprint 1 (5 Days) – Foundation Setup

Epic	Story	Story Points
Instance Setup	Request and configure PDI	2
Table Design	Create Salesforce Table	2
Table Design	Create Admission Table	3
	(with Choices, References)	
UI Form Layout	Design basic form layout	3
	(Salesforce & Admission)	
Total		10 Points

## Sprint 2 (5 Days) – Logic & Automation

Epic	Story	Story Points
Client Scripting	Auto-populate fields from	3
	references	
Client Scripting	Pincode-to-location	3
	automation	
Client Scripting	Result calculation logic	5
Process Flow	Admission status process	3
	configuration	
Total		14 Points

### Sprint 3 (5 Days) – Finalization & Testing

Epic	Story	Story Points
Student Progress	Create and link Student	2
	Progress table	
Form Design	Layout and UI for Student	2
	Progress	
Client Scripting	Total marks & percentage	3
	calculation	

Testing & Output	End-to-end functionality	3
	testing	
Total		10 Points

# ii Sprint Velocity Calculation

Metric	Value
Total Story Points	10 (S1) + 14 (S2) + 10 (S3) = 34
Number of Sprints	3
Velocity	34 ÷ 3 = ~11.3 Story Points per Sprint

# Velocity Insight

Your team's average velocity is ~11 story points per sprint, meaning you can deliver around 2–3 medium-difficulty features or 1 high-effort epic in each sprint.
